Shares no.:	159.094.224
Market symbol:	DN
Trading market:	MTS AeRO Premium

Important events that need to be reported: Launch of the organic compost brand AgriGold, turning farm resources into a new business line

DN AGRAR GROUP S.A. (DN), one of the leading integrated agrifood companies in Romania and the largest dairy milk producer in Europe, informs shareholders and investors about the launch of AgriGold, a new brand of premium organic compost developed and tested on its own farms.

With AgriGold, DN AGRAR is taking the next step in developing its composting activities, moving from the internal use of compost to building a dedicated commercial brand.

Designed for farmers, horticultural producers and other agricultural users, AgriGold provides a natural solution to enrich soils with organic matter, improve soil structure and support long-term soil fertility.

AgriGold is now available to customers through direct sales channels, including the dedicated AgriGold website and the company's sales team for larger agricultural orders. The product is offered in packaging formats adapted to different customer needs, ranging from 5–40 litre bags to larger volumes for professional agricultural operations.

Customers can access detailed product information, application recommendations, and purchasing details, as well as calculate the quantity of organic compost needed for their specific agricultural requirements, at www.agrigold.eu.

Peter de Boer, CEO DN AGRAR Group:

“ Healthy soil is the foundation of productive agriculture, and maintaining its fertility is increasingly important as farmers face changing climatic conditions and growing pressure to use resources more efficiently.

AgriGold builds on our own farming experience and our commitment to developing practical solutions that create value beyond our operations. We have developed and tested this organic compost on our farms, and our ambition is now to make it available to other agricultural producers. We see strong potential for this business to grow in Romania and internationally, while demonstrating how innovation and circular agriculture can generate new opportunities for both farmers and DN AGRAR..”

AgriGold is a mature and stable organic compost that helps improve soil quality by increasing organic matter content, supporting soil structure and water retention, and providing essential nutrients, including nitrogen, phosphorus, potassium, calcium and magnesium. It also contributes to creating favorable conditions for soil microbial activity. These benefits are particularly relevant as farmers face increasingly frequent periods of drought, soil degradation and the need to use agricultural resources more efficiently.

Developed and tested in DN AGRAR's own farming operations, AgriGold builds on the Group's practical experience in managing agricultural soils. It is suitable for a wide range of applications, including field crops, vegetable cultivation, greenhouses and polytunnels,

orchards, vineyards, as well as green spaces and gardens. Application rates depend on crop type, soil characteristics and fertilization requirements. The compost is made exclusively from organic matter sourced from DN AGRAR's own farms, ensuring control over raw material origins and traceability throughout production. Through an automated aerobic composting process lasting approximately 30 - 40 days, temperature, oxygen and moisture levels are monitored to obtain a mature and stable product. The organic compost also undergoes laboratory testing to verify its composition and microbiological parameters, supporting consistent product quality.

AgriGold is produced at DN AGRAR's two existing automated composting facilities at Apold and Lacto Agrar farms, commissioned in 2024 and 2025, respectively, developed through a total of EUR 3.5 million investment. Together, the facilities can process 40,000 tons of livestock manure annually, with a combined compost production capacity of 14,000 tons per year. The oganic compost has Ecocert certification and the certification process under EU organic standards is also underway. In parallel, the Group is pursuing international Gold Standard certification for voluntary carbon credits generated through methane emission reductions achieved by its composting operations. DN AGRAR estimates that each composting facility could generate approximately 16,000 carbon credits annually, representing an additional revenue stream and further strengthening the Group's circular economy model and long-term sustainability strategy. These steps support DN AGRAR's ambition to strengthen the brand's market positioning, expand distribution in Romania and access international markets.

Composting is one of the business lines included in DN AGRAR's 2025 - 2030 Development Strategy, through which the Group aims to diversify its revenue streams and maximize the value of its own resources. The commercial strategy focuses on both direct sales to professional customers and partnerships with agricultural distributors and garden centres, targeting key market segments including vineyards and wineries, cereal producers and large-scale farmers, vegetable growers, fertilizer manufacturers, and greenhouse developers.

The Group targets an annual sales volume of approximately 40.000 tons annually starting 2030, focusing on CEE and DACH region, with the objective of expanding its customer base, strengthening market penetration, and developing a scalable distribution network to support long-term revenue growth.

In 2027, DN AGRAR plans to commission two additional composting facilities, aiming to double its composting capacity to 28,000 tons, with financing for these facilities already secured in 2026. This expansion will bring the implementation of the investments planned for this business line through 2030 to approximately 60%.
