The electricity distribution tariffs used for billing shall be calculated by summing up the specific tariffs for the electricity distribution service according to the voltage level at the point of delimitation of the electrical installations belonging to the concessionaire distribution operator from those of the final customer, established according to the electricity distribution contract.

The electricity distribution tariffs will be the basis for the revenues from the electricity distribution activity achieved by the distribution operator within the Electrica Group during 2024.

The ANRE Order approving the specific tariffs for the electricity distribution service and of the price for reactive electricity for 2024 for DEER is available in electronic format on the Company's website at <https://www.electrica.ro/en/investors/results-and-reports/current-reports/>.
