Important events to be reported: Commencement of construction of BESS project and securing of green financing

The management of Premier Energy PLC (hereinafter referred to as the "Company") informs the market about the commencement of construction of its 200 MW (power input/output) / 400 MWh (capacity) Battery Energy Storage System (BESS) project located near Iași, Romania.

The total development and construction cost of the project is estimated at approximately EUR 75 million, in line with the Company's previous disclosure dated 20 November 2025 regarding the acquisition of this ready-to-build project (Current Report no. 31/2025, available **HERE**).

The BESS facility is expected to be one of the largest battery storage projects in eastern Romania, is located near the border with the Republic of Moldova and is planned to operate as part of Romania's core electricity transmission network, contributing to improved stability, flexibility and resilience of the power system.

In addition, the Company has secured green financing of up to EUR 100 million from Československá obchodní banka, a. s. (ČSOB) to support the construction of this BESS project, as well as to assist with the financing and development of additional renewable energy assets, including wind and solar assets, across the Company.

The financing represents an important step in advancing the Company's strategic objectives and further strengthening its position as a key player in the energy transition in Southeast and Central Europe.

Jose Garza, CEO
